

Publishing and Embedding Guide

GitHub Pages, Iframes, CMS Constraints, and Update Ownership

Publishing and Embedding Guide

A dashboard is not finished when the HTML works on your laptop. It needs an approved home, an update owner, and a clear decision about who is allowed to see the data.

GenAI data guardrail: Use fictional, public, aggregated, or properly sanitized information with public generative AI tools. Do not enter student records, staff records, personally identifiable information, credentials, sensitive cybersecurity details, legal records, confidential procurement material, vendor-confidential information, or sensitive district project information unless your district has explicitly approved the tool and data use.

Hosting Options

Option	Best Use	Strengths	Watch For
GitHub Pages	Public/sample dashboards and approved static sites	Free/static hosting, works well with HTML/CSS/JS	Repository and data become public unless access is otherwise controlled
District web server	Internal or public district-controlled hosting	Local governance and familiar URL	Requires IT support/maintenance
Google Sites iframe	Embed an externally hosted display	Easy placement on a Site	Sandboxed behavior; local storage and some browser features may be constrained
WordPress iframe	Embed externally hosted JS dashboard	Avoids editors stripping JavaScript	Set adequate height; confirm responsive behavior
LMS page iframe	Course/training demonstrations	Keeps learning resource inside course	LMS security policies may restrict embeds

GitHub Pages Folder Pattern

```
my-kpi-dashboard/  
  index.html  
  data.md  
  README.md
```

For a library with several dashboards:

```
kpi-library/  
  index.html  
  dashboards/  
    technology-operations/  
      index.html  
      data.md  
    help-desk/  
      index.html  
      data.md
```

Generic iframe

```
<iframe  
  src="https://YOUR-ORG.github.io/YOUR-REPO/dashboards/technology-operations/"  
  width="100%"  
  height="760"  
  style="border:0;display:block;"  
  loading="lazy"  
  title="Technology Operations KPI Dashboard">  
</iframe>
```

Use a descriptive title. Set an explicit height that fits the display or use an approved responsive embed technique.

Why External Hosting Helps with JavaScript

Some content-management systems preserve HTML/CSS but remove JavaScript when content is saved. A reliable pattern is to host the working dashboard on GitHub Pages or another approved web host, then embed the page with an iframe.

Publication Decision Matrix

Data Type	Public Dashboard	Internal Leadership Dashboard	Restricted Operational View
Aggregate project progress	Often appropriate after review	Yes	Yes
Help desk SLA percentages	Often appropriate after review	Yes	Yes
Student-level records	No	Only in approved systems	Restricted
Staff-level performance/personnel data	No	Needs HR/legal governance	Restricted
Vulnerability details	No	Usually restricted	Restricted security workflow
Incident specifics before communications approval	No	Limited need-to-know	Restricted
Vendor-confidential pricing/terms	No	Limited approved audience	Restricted
Publicly approved budget totals	Often	Yes	Yes

Version and Update Practices

- Display the reporting period and last-updated date.
- Keep KPI definitions under version control.
- Assign one person/team to update the data source.
- Keep a simple change log for formula/target changes.
- Test links after every structural change.
- Keep a known-good prior version for rollback.
- Do not let a public dashboard become the first place leaders learn about a sensitive incident.

GenAI Prompt: Prepare an Embed

I have an approved public dashboard at:
[URL]

Create an accessible iframe embed for:
[Google Sites / WordPress / LMS / generic web page]

Requirements:

- 100% width;
- reasonable explicit height;
- no border;
- lazy loading;
- descriptive title;
- mobile-friendly guidance.

Do not add tracking scripts or external services.

Source and Alignment Notes

This sample library is designed as a companion to **Module 8: Project Management and Change Leadership** in the TCEA Technology/IT Director Certification. It extends the module's emphasis on desired outcomes, progress reporting, KPIs, dashboards, communication, change adoption, and responsible generative AI use.

Useful reference points:

- Make Data Displays Without Writing Code - TCEA TechNotes article on GenAI-assisted data displays, dashboard workflows, Google Sheets, GitHub Pages, and embedding.
- KPI Dashboards Built with Gen AI - TCEA TechNotes article demonstrating a browser-based dashboard paired with an editable Markdown data file.
- Metrics and KPIs Made Easy - TCEA TechNotes introduction to actionable KPI scorecards for technology leaders.
- K-12 KPI Dashboard Generator - browser-based KPI planning and dashboard starter.
- District KPI Dashboard Example - example of a scoreboard-style district dashboard.
- Data Display Patterns Field Guide - examples, prompts, and hosting considerations for lightweight visual displays.

Data note: Every Ardent ISD number in this library is illustrative sample data. Replace it with locally verified data before operational use.
